OVG-4 Vapor Generator

""Lonestar is a versatile gas analyzer and chemical monitor in a portable, self contained unit.""

The Owlstone OVG-4 is a compact, cost effective vapor generation system, which can generate pure, precise, repeatable and accurate trace concentrations of chemicals and calibration gas standards.

Incorporating permeation tube technology the OVG-4 can replace multiple gas cylinders resulting in significant cost and space savings as well as eliminating dangers associated with cylinders. The ability to generate arbitrarily complex gas mixtures makes the OVG-4 vapor generator suitable for a broad range of applications from calibration of explosive detectors in military and homeland defence to testing personal moni-

tors in industrial health and safety applications.

The OVG4 vapour pressure generation system is a cost effective solution for any application requiring accurate precise and safe gas generation. Examples include:

Product applications

- Calibration of environmental emissions monitoring sensors
- Generation of complex blended gas mixtures
- Sensor and instrument development and testing
- Research and development and general laboratory use

Product Benefits

- Cost saving by replacing multiple, costly gas cylinders
- Small quantity of target chemicals reduces risk of dangerous exposure
- Fast and easy sample replacement removes dangers associated with high pressure cylinder
- Accuracy and precision even at very low concentrations with superior long term stability and repeatability
- Adjust concentration from part per billion to part per million levels
- Reduce set time and generate blended gas mixtures rapidly

Price and availability
